# Hsuan-Fu (Jeff) Hsu

*Embedded Systems and AI Engineering | C++, Python, Raspberry Pi, Arduino, AWS*

Los Angeles, CA | +1 602-520-6877 | hsuanfu0709@gmail.com | LinkedIn | GitHub | Portfolio

## EDUCATION

**University of Southern California** — Los Angeles, CA
Master of Science in Computer Science — Jan 2026 - May 2027 (Expected)

**National Taipei University** — New Taipei City, Taiwan
Bachelor of Science in Computer Science — Sept 2020 - June 2024

## SKILLS

**Proficient:** C++, Python, C#, Git

**Familiar:** Raspberry Pi 4, Arduino Nano 33 BLE Sense, I2C, BLE, Linux, OpenGL, GLSL, AWS (Lambda, SQS, DynamoDB, CDK), Docker, pytest, GitHub Actions, SQL, TypeScript, PyTorch, Sentence Transformers, NumPy

**Exposure:** TensorFlow, tsfresh

## EXPERIENCE

**National Taipei University** — New Taipei City, Taiwan
*Undergraduate Researcher | Advisor: Prof. Bor-Shing Lin* — July 2022 - Feb 2024

- Co-developed a portable NIR sensing device with two teammates, using an **Arduino Nano 33 BLE Sense** and an AS7263 sensor connected over I2C. The device sampled 810/860 nm signals at 34 Hz and transmitted readings over BLE.
- Built a **Python** pipeline to process NIR signals from 30 participants. The team's best model estimated uric acid levels with 10.3% MAPE in leave-one-subject-out testing.
- Received an individual NSTC research grant and placed fourth in NTPU's project competition as part of a three person team.

**Tech-Management Workshop Co., Ltd.** — Taichung, Taiwan
*Software Engineer Intern* — July 2026 - Aug 2026

- Built a birth grant application system using **ASP.NET Core MVC** and **SQL Server** as the sole developer, and deployed it to 29 government offices.
- Replaced manual uploads of entire datasets with a sync process that transfers only changed records across 29 offices.
- Optimized SQL Server processing and storage, reducing database latency by at least 50% and resource usage by at least 30%.

## PROJECTS

**Classroom AC Control System — USC IEEE HackIoT (team of 4)** — Oct 2026
*Raspberry Pi 4, Python, YOLO, DHT11, Supabase, TypeScript* | GitHub

- Set up a **Raspberry Pi 4** with teammates to count classroom occupants using YOLO at approximately 7 FPS and log DHT11 temperature and humidity readings to Supabase every 30 seconds.
- Ported a Python air-conditioning model to **TypeScript** and verified matching results across eight weeks of simulated operation. Built a Next.js simulator that estimated 27% energy savings for one room over that period.

**3D Rendering Engine** — Oct 2022 - Jan 2023; rebuilt Nov 2026
*C++, OpenGL, GLSL, CMake* | GitHub

- Rebuilt a **C++**/**OpenGL** renderer with an OBJ/MTL parser and vertex deduplication, reducing a test model's vertex count by 71% and parse time from 108 ms to 56 ms.
- Added Cook-Torrance PBR with image based lighting, PCF shadows, and glTF 2.0 loading. Fuzz tested both loaders under ASan/UBSan, with no issues found across more than 710,000 OBJ inputs.

**CatalogBridge — AWS CSV Import Service** — Oct 2026
*Python, AWS CDK, Lambda, SQS, DynamoDB* | GitHub

- Built and deployed a serverless CSV import service using **AWS** CDK, Lambda, SQS, DynamoDB, and Cognito. All 16 end to end tests passed against the live deployment.
- Used **DynamoDB** transactions to prevent duplicate row writes, verified in nine live crash and duplicate tests. Reduced job completion time after a crash from 365 s to 5 s.

## PUBLICATION

Coauthor, "Noninvasive Portable System With Dual Near-Infrared Light Technology for Monitoring Uric Acid Concentration," IEEE Transactions on Human-Machine Systems, accepted for publication, Aug 2026.
